

Studio One® Pro

One DAW for All.

Studio One Pro

Studio One Pro 7 is an all-in-one production powerhouse with everything you need to record, produce, mix, master, and perform in one intuitive application.

With over 30 new features and improvements, Studio One Pro 7 sets a new standard for creative music production and performance.

Creating and shaping sounds has never been easier thanks to Studio One Pro 7's new loop-based production tools and virtual instruments. Seamlessly separate samples with built-in AI-Powered Stem Separation. Tap into Splice's massive sample libraries directly from Studio One's browser – the first and only DAW with this innovative workflow. Use "Search with Sound" to find thousands of free, curated Splice samples perfectly synced to your project's beat, key, and tempo. Audition new arrangements with the Integrated Launcher. And sculpt new sonic dimensions with Deep Flight One – a virtual instrument packed with evolving soundscapes and cutting-edge presets that'll take your music to the next level!

Whether you're just starting your journey or perfecting your process, Studio One Pro 7 delivers the tools and inspiration for producers, beat-makers, and musicians alike to create their best work.

Introducing Studio One Pro 7

- **NEW in 7!** Impact Integration for Note Editor
- **NEW in 7!** New Virtual Instrument: Deep Flight One
- **NEW in 7!** Interactive Scale and Loop Tools
- **NEW in 7!** Global Transpose
- **NEW in 7!** Advanced Tempo Detection
- **NEW in 7!** CV Instrument

Integrated Launcher

Quickly craft new arrangements with ease using a dynamic grid of audio or MIDI loops and patterns that can be triggered and edited in real time. Now, creators can record or import audio and MIDI directly into cells, edit the contents, create scenes and playlists, and capture Launcher live performances directly on the timeline. Best yet, the view is integrated into the arrangement allowing producers to view both the arrange and launch windows at the same time.

AI-Powered Stem Separation

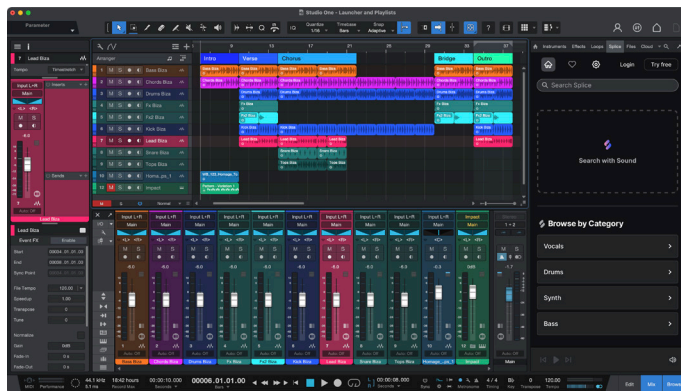

One of the most in-demand features, AI-powered Stem Separation allows creators to un-mix an existing audio track into four isolated stems – an innovative way for sample-based producers to quickly craft beats and create remixes on the fly.

Impact Integration for Note Editor

Conveniently create patterns, adjust parameters, and edit your virtual drum sounds – all without opening another window.

The only DAW with Splice Integration

Access Splice – the industry-leading catalog of royalty-free sounds and producer tools – directly from Studio One Pro 7. Using "Search with Sound", creators can drop in audio or capture a selection within a track and instantly discover compatible sounds from Splice that sync to the project's key and tempo. While existing Splice users will enjoy this powerful integration, users new to Splice will have access to thousands of Splice samples – hand picked and made free for Studio One Pro 7 users, regardless of whether they are subscribed to Splice or not.

New Virtual Instrument: Deep Flight One

A popular sound set prized for its soundscapes, drones, pads, percussive and lead sounds is now available as a standalone instrument for all users of Studio One Pro 7. Experience an

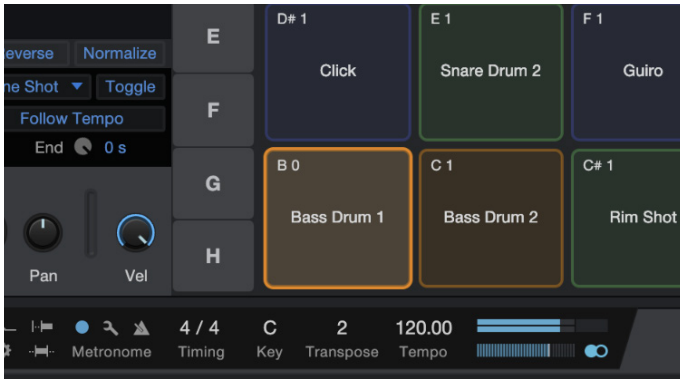

expanded set of evolving soundscapes, atmospheric textures, and cutting-edge presets perfectly suited for ambient exploration.

Interactive Scale and Loop Tools

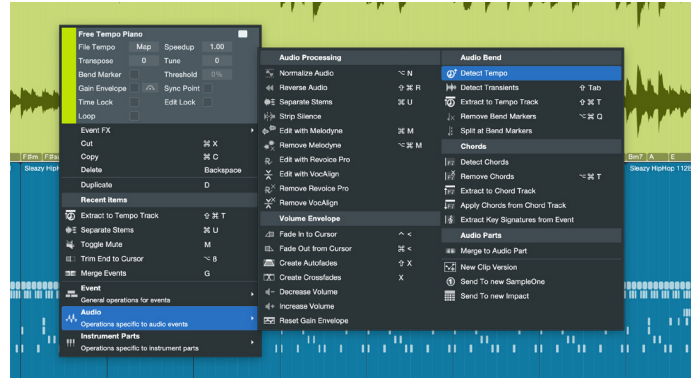

All scale-related features are now in one place: Work with preset scales, or create your own; use the time-saving Loop Tool as an intuitive alternative to duplicating events; or use the Event Loop to quickly create looped copies.

Global Transpose

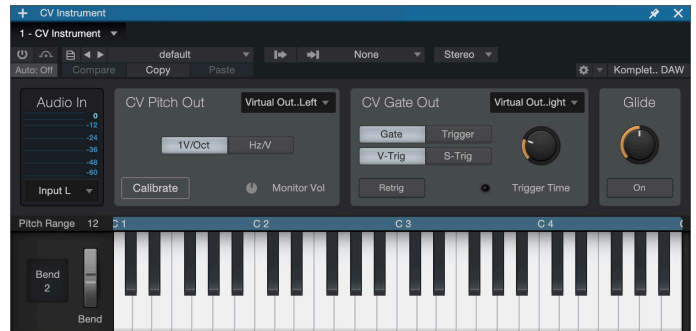

Change the key of an entire song with just one click and transpose audio and note events in real time. This new feature updates the song key signature, chords, and notes all in one.

Advanced Tempo Detection

Studio One Pro 7 now features tempo detection for audio events of any length, as well as the option to extract the original tempo map to the Tempo Track or flatten the tempo with a single click.

CV Instrument

Users with vintage or modern analog synthesizers are now able to control their instruments directly from Studio One Pro 7.
