- Video Timeline displays AVI, JPG, BMP, PGN files

Audio and Video Timeline

Accurate Stereo Timeline to synchronize your light sequences with Audio and video files.

Just load a multimedia file, add some markers and drop your scene buttons in the lines (keep the SHIFT key pressed). Create an unlimited number of lines and easily adjust the duration of your blocks.

The multimedia lines show the wave form of the audio signal. The wave form can be filtered and displayed by frequencies in Mono and Stereo signal.

15 minutes of Timeline show allowed with the Club DMX package.

Generate Global Effects Automatically

Generate several DMX effects automatically after adding some fixtures in a new project. Create Pan/Tilt, RGBW, Dimmer, Shutter effects buttons immediately so that users can create and start a show in just a few seconds.

All the Effects are Global and can be applied to a selection of different lights or different Profile that can play the Effect.

Take Control in Live immedeatelly

You can take control of your lights at anytime, all you have to do is select the fixtures or call a group of light via a shortcut key or Midi command, then choose the DMX values from the Preset or Channel controls. The values are applied immediately in Live and your light will respond instantly.

You can also edit and create new Scene and Effect buttons in a few click while user is playing something else in live.

Eyasy Quick Profile Editor

Complete Profile Editor included, easy and fast to operate with more than 7,000 existing library or Profile files. Create easily the profile of your new light in a few steps to generate some Effects automatically.
