PROCAB

CABLES YOU CAN RELY ON

Classic series

★★★★☆

PROCAB CLASSIC SERIES CATALOG

Procab is the Belgian brand that specializes in premium quality cables and cable accessories for a large variety of applications. The brand is well-known for developing innovative and adapted solutions for the pro AV as well as the home markets for over 18 years.

Inside this catalog, you will find an extensive range of premade audio, video, data and power cabling with matching adapters that can be used for fixed installations as well as mobile applications. Besides a wide selection of microphone and signal cables, the audio category also covers speaker and multimedia cables. Other categories cover HDMI as well as SVGA cables and adapters plus other composite cables. For data transfer, Midi, UTP, USB, fiber and DMX cables are also to be found.

Whether you are working on a fixed system, preparing a stage or touring with a band, make your installation sure by using Procab's power cables!

Procab takes great pride in the fact that all its cables are submitted to rigorous testing before they are launched. All manufactured cables comply with global and EU environmental regulations concerning hazardous substances.

For more information about Procab and its products, visit www.procab.be

PRIME SERIES

★★★★★

Prime premade series offers you the reference in cables. The series consists of the most demanded cables in the field. All connections are equipped with Neutrik BAG connectors. Besides the top-quality black connectors, the cables used in this series are also designed to the highest standards.

CLASSIC SERIES

★★★★☆

Classic premade series offers a stunning line of cables that will satisfy anyone who uses it. Not only the design but also the quality of the cables themselves is unheard of in this price range. Our confidence in these products is reflected in the 5-year limited warranty offered on all classic models.

5 year warranty

BASIC SERIES

★★★☆☆

Basic series consists of a complete line containing all the standard cables that you will need in your installations. Due to its simplicity, our basic cable series has become very popular with all types of users.

Video cables

CLASSIC SERIES VIDEO CABLES

The Procab Classic series offers video connection cables meeting the highest requirements for current state-of-the-art video applications, including connection cables for both analog and digital video transmission. For every application where a video source device such as a camera, DVD or Blu-ray player needs to be connected to a video display device such as a monitor, beamer or flatscreen, Procab offers the best suited connection solution.

COMPOSITE VIDEO

Composite video is an analog video format whereby the luminance (brightness) and chrominance (color) are carried over a single wire. The cable used for composite video transmission is always a coaxial cable with an impedance of 75 Ohm, and the connections will always be made by means of two connector types called BNC and RCA. The color used to mark the connector for a composite video signal is always yellow.

VGA CABLE

Video Graphics Array, also known as VGA, is an analog video format whereby the individual components of a video signal are carried over separate wires. It consists of three basic colors that a video signal is composed of (red, green and blue) accompanied by horizontal and vertical synchronization signals used for the correct alignment of the image.

The cable used for VGA video transmission is always composed of five coaxial cables, three of them are representing the color information (red, green and blue), and the two remaining ones represent the horizontal (white) and vertical (black) synchronization. Some additional wires are added for exchanging data between the source and display device. The cable is more complex and therefore more expensive than a composite video cable, but the VGA brings the advantage of higher resolutions compared to composite video.

Data cables

CLASSIC SERIES DATA CABLES

In order to achieve a digital signal transmission between several devices, communication should be made according to standards. Several standards are defined, each especially designed for use with specific applications. The two most important standards for professional stage and broadcast use in the field of audio and video are the AES/EBU and the DMX standards.

The **AES/EBU standard** is a standard which is designed to carry digital audio signals between devices, developed by the Audio Engineering Society and European Broadcasting Unit. There are three different kinds of mediums that can be used for transferring digital audio signals according to the AES/EBU standard:

Balanced – 3 Conductor, 110 Ohm twisted pair cabling with an XLR connector. (This kind of cables is available in both Reference and Classic series)

Unbalanced – 2 Conductor, 75 Ohm coaxial cable with an RCA connector. It uses the same patching, cabling and infrastructure as analog and digital video interconnections. A BNC variant also exists. (This kind of cables is available in both Reference and Classic series)

Optical – Optical fiber, usually plastic but occasionally glass, with an F05 connector, also known as TOSLINK of S/PDIF. (This kind of cables is available in both Reference and Classic series)

Digital Multiplexed (DMX) is a serial communication protocol which is based on RS-485 and is commonly used to control stage lighting and effects. It was originally intended as a standardized method for controlling light dimmers, but, through further developments it became the major way to control special effects, moving effects and many more devices in the field of on- stage and entertainment technologies.
