

*"When an artist depends on you to supply the best and most reliable gear and the sound company who has to do the same day in and day out has the same challenges, it makes me feel good to know that we both choose Radial."*

~ John Griffiths  
(Production Manager, Billy Ray Cyrus)

ProD2

## ProD2™ Stereo Direct Box

Part No. R800 1102

- Stereo direct box designed for keyboards**
- Smooth, warm sound rounds out digital edge**
- Able to handle huge transients without choking**
- May be rack mounted for touring rigs**

The Radial ProD2 is a compact stereo direct box developed specifically to address the needs and challenge of interfacing a stereo keyboard to a professional audio system. This passive DI features two independent channels with separate inputs and thru-puts for the artist's stage amp and two fully isolated outputs for the P system.

At the heart of the design are two high performance Eclipse ET-DB2 transformers. These deliver 20Hz to 20 performance with less than 1.5dB deviation above 18kHz and are able to withstand tremendous signal level without distortion. Unlike active circuits that overload when the signal exceeds the rail voltage, transformers saturate. This creates a pleasing effect that naturally rounds out the tone, acting like a subtle limiter which is particularly advantageous when interfacing the ProD2 with digital pianos, samplers and drum machines that can produce excessive dynamics. Transformers are particularly adept at eliminating hum and buzz caused ground loops.

As with all Radial products, the ProD2 is built tough to handle the rigors of professional touring. A 14-gauge steel ultra rigid i-beam skeleton frame eliminates opportunity from outside stress to flex the sensitive PC box and cause premature solder joint failure. The innovative book-end design creates a protective zone around connectors and switches further increasing lifespan. And a full bottom no-slip pad adds mechanical isolation and electrical insulation to further reduce opportunity for noise.

The Radial ProD2's warm sound, legendary build quality and compact design have made it the most popular stereo direct box made today.

## ProD2™ - Applications

### ProD2 with Stereo Keyboard

The ProD2 is designed for stereo devices like keyboards. Simple, straight ahead hookup makes it easy to connect your keys to your recording system for great stereo sound!

### ProD2 with Drums & Samplers

Driving the output from a sampler or electronic drum machine to the PA system has never been easier. The ProD2 delivers plenty of headroom and lets you connect a local DJ mixer too.

### ProD2 with Instruments

Two Radial ProDI direct boxes in one, multi instrumentalists rejoice! The ProD2 is perfectly well suited for bass, acoustic guitar or just about any instrument with a pickup.
